

INNOVATIVE AND EASY TO USE

SunTech Medical, a company with a twenty-year history of research in blood pressure technology, has developed a pragmatic approach to address the issue of reliable blood pressure measurement. The new SunTech® 247™ Diagnostic Station combines the efficiency of an automated monitor with the convenience of a manual mode that allows the clinician to take a BP reading with a stethoscope whenever needed.

In healthcare settings, the time saving efficiency of an automated reading is highly desirable. However, there are patient conditions (arrhythmia), patient groups (pediatrics), and environments (moving vehicles) where automated monitors do not always function well (Jones et al., 2003). In these situations, having a manual mode built into the automated device is eminently practical.

Accurate automated readings in about 30 seconds

Manual BP mode whenever auscultatory readings are desired

Purchase the SunTech 247 configured as you want from the factory or upgrade in the field at any time. No tools required!

With connect-and-go capability, adding optional temperature and pulse oximetry modules is effortless.
